## Class X Mathematics

## CBSE Board, Set - 3

## General Instructions:

(i) All questions re compulsory.
(ii) The question paper consists of 31 questions divided into four sections - A, B, C and D.
(iii) Section A contains 4 questions of 1 mark each, Section $B$ contains 6 questions of 2 marks each, Section C contains 10 questions of 3 marks each and Section D contains 11 questions of 4 marks each.
(iv) Use of calculators is not permitted.

## Section-A

Q1. In Fig. 1, PA and PB are tangents to the circle with centre 0 such that $\angle \mathrm{APB}=50^{\circ}$. Write the measure of $\angle O A B$.

Figure 1
Sol. 1 In $\triangle A O B, O A=O B$ (radius)
$\therefore \angle \mathrm{OAB}=\angle \mathrm{OBA}$
$=\mathrm{x}$ (let)

In fig. , OAPB is quadrilateral, $\angle \mathrm{OAP}$ and $\angle \mathrm{OBP}$ is right angle (radius is perpendicular to the tangent at point of contact)

Using angle sum properly of quadrilateral,
$\therefore \angle \mathrm{AOB}+\angle \mathrm{OBP}+\angle \mathrm{BPA}+\angle \mathrm{OAP}=360^{\circ}$
$\angle \mathrm{AOB}+90^{\circ}+50^{\circ}+90^{\circ}=360^{\circ}$
$\Rightarrow \angle \mathrm{AOB}+230^{\circ}=360^{\circ}$
$\Rightarrow \angle \mathrm{AOB}=360^{\circ}-230^{\circ}$
$=130^{\circ}$
$\operatorname{In} \triangle \mathrm{OAB}$,
$\angle \mathrm{OAB}+\angle \mathrm{AOB}+\angle \mathrm{OBA}=180^{\circ}$
$\Rightarrow \mathrm{x}+130^{\circ}+\mathrm{x}=180^{\circ}$
$\Rightarrow 2 \mathrm{x}+130^{\circ}=180^{\circ}$
$\Rightarrow 2 \mathrm{x}=50^{\circ}$
$\Rightarrow \mathrm{x}=25^{\circ}$
Hence $\angle \mathrm{OAB}=25^{\circ}$

Q2. If $x=--$, is a solution of the quadratic equation $3 x^{2}+2 k x-3=0$, find the value of $k$.

Sol. 2 Since it is given that $\mathrm{x}=$ - is a solution of the given quadratic equation so it must satisfy the given equation.

So putting $\mathrm{x}=-$ is equation.

$$
3(--)+2 k(--)-3=0 .
$$

$$
\begin{aligned}
& 3-+2 k(--)-3=0 . \\
& -\quad 3=0 . \\
& =-\quad 3=- \\
& =\quad-
\end{aligned}
$$

Hence the value of $k$ is -.

Q3. The top of the two towers of height $x$ and $y$, standing on level ground, subtend angles of $30^{\circ}$ and $60^{\circ}$ respectively at the centre of the line joining their feet, then find $x$ : $y$.

Sol. 3 Let AB and CD be the two towers of height y and x respectively subtending angles of $60^{\circ} \& 30^{\circ}$.

We are required to find the ratio $x: y$.
Let O be the mid-point of the line joining their feet.

FREE Education

$$
\begin{equation*}
O B=O C=-B C \tag{i}
\end{equation*}
$$

Now, in $\triangle \mathrm{AOB}$

$$
\tan 60^{\circ}=-=-
$$

$$
\tan 60^{\circ}=\frac{}{(-) \mathrm{BC}} \quad\{\text { from }(\mathrm{i})\}
$$

$$
\begin{equation*}
\Rightarrow(\sqrt{3} / 2) \mathrm{BC}=\mathrm{y} \tag{ii}
\end{equation*}
$$

And in $\triangle$ DOC
$\tan 30^{\circ}=-=-$

$$
\tan 30^{\circ}=\frac{}{(1 / 2)} \quad\{\text { from }(\mathrm{i})\}
$$

$$
\begin{equation*}
\frac{}{2 \sqrt{3}}=x \tag{iii}
\end{equation*}
$$

$x: y=\frac{}{2 \sqrt{3}}:\left(\frac{\sqrt{3}}{-}\right) B C$

$$
\begin{aligned}
& x: y=\frac{2 B C \sqrt{ } 3}{2 \sqrt{3 B C}}=\frac{\sqrt{ }}{\sqrt{3}} \\
& x: y=1: 3
\end{aligned}
$$

Q4. A letter of English alphabet is chosen at random. Determine the probability that the chosen letter is a consonant.

Sol. 4 There are 26 English alphabets in total, and so total out comes $=26$, out of these 26,5 are vowels.
$\Rightarrow$ Number of Consonants $=$ favorable outcomes $=26-5=21$.
Here the required probability i.e. prob (chosen is a consonant) $=$ - .

## Section - B

Q5. From a point T outside a circle of centre 0 , tangents TP and TQ are drawn to the circle. Prove that OT is the right bisector of line segment PQ.

Sol. 5 Suppose OT intersects PQ at C.
Then, in $\Delta$ QTC, $\Delta$ PTC
$\mathrm{TP}=\mathrm{TQ}$ (Tangents from an external point are equal)

$\angle \mathrm{PTC}=\angle \mathrm{QTC}(\mathrm{TP} \& \mathrm{TQ}$ are equally inclined to OT$)$
$\& \mathrm{TC}=\mathrm{TC}$ (common)
By SAS criterion of similarity, are have
$\Delta \mathrm{PTC} \cong \Delta \mathrm{QTC}$.
$\Rightarrow \mathrm{PC}=\mathrm{CQ}$ and $\angle \mathrm{PCT}=\angle \mathrm{QCT}$
But $\angle \mathrm{PCT}+\angle \mathrm{QCT}=180^{\circ}$
$\Rightarrow \mathrm{PCT}=\angle \mathrm{QCT}=90^{\circ}$
$\Rightarrow \mathrm{OT} \perp \mathrm{PQ}$.
Hence OT is the right bisector of line segment PQ.
Q6. Find the middle term of the A.P. 6, 13, 20, ---, 216.
Sol. 6 The given $A \cdot P$ is,
$6,13,20, \ldots \ldots \ldots . .$.
Here $\mathrm{a}=6, \mathrm{~d}=13-6=7$.

$$
\begin{aligned}
& \mathrm{a}_{\mathrm{n}}=216 . \\
& \Rightarrow \mathrm{a}+(\mathrm{n}-1) \mathrm{d}=216 . \\
& 6+(\mathrm{n}-1) 7=216 \\
& \Rightarrow 6+7 \mathrm{n}-7=216 \\
& \Rightarrow 7 \mathrm{n}-1=216 \\
& \Rightarrow 7 \mathrm{n}=217 \\
& \Rightarrow \mathrm{n}=31
\end{aligned}
$$

which is odd.
Hence the middle term is $(-)$ term
$=(-)$ term
$=16^{\text {th }}$ term
$\mathrm{a}_{16}=\mathrm{a}+15 \mathrm{~d}$

```
\(=6+15 \cdot 7\)
\(=6+105\)
\(=111\)
```

Hence the middle term is 111.
Q7. In Fig.2, AB is the diameter of a circle with centre O and at is a tangent. If $\angle \mathrm{AOQ}=58^{\circ}$, find $\angle A T Q$.

Figure 2

Sol. 7 Since A B is the diameter of the circle
So, $\angle \mathrm{AOQ}+\angle \mathrm{QOB}=180^{\circ}$
(linear pair)

$$
\begin{aligned}
& 58^{\circ}+\angle \mathrm{QOB}=180^{\circ} \\
& \angle \mathrm{QOB}=180^{\circ}-58^{\circ} \\
& =122^{\circ}
\end{aligned}
$$

$\operatorname{In} \Delta$ OBQ,

$$
\begin{aligned}
& \mathrm{OB}=\mathrm{OQ} \quad \text { (radius) } \\
& \angle \mathrm{OBQ}=\angle \mathrm{OQB}=\mathrm{x} \\
& \angle \mathrm{BOQ}+\angle \mathrm{OBQ}+\angle \mathrm{OQB}=180^{\circ} \\
& 122^{\circ}+\mathrm{x}+\mathrm{x}=180^{\circ} \\
& 2 \mathrm{x}=58^{\circ} \\
& \Rightarrow \mathrm{x}=29^{\circ} \\
& \angle \mathrm{OQT}=180^{\circ}-\angle \mathrm{OQB} \\
& \quad=180^{\circ}-29^{\circ}
\end{aligned}
$$

$\angle O Q T=151^{\circ}$
AOQT is quadrilateral
$\angle \mathrm{D}=58^{\circ}, \quad \angle \mathrm{BAT}=90^{\circ} \quad \angle O Q T=151^{\circ}$
So, $\angle \mathrm{ATQ}=260^{\circ}-\left(58^{\circ}+90^{\circ}+151^{\circ}\right)$

$$
=360^{\circ}-299^{\circ}
$$

$\angle \mathrm{ATQ}=61^{\circ}$
$\Rightarrow \angle \mathrm{ATQ}=61^{\circ}$
Q8. If $\mathrm{A}(5,2), \mathrm{B}(2,-2)$ and $\mathrm{C}(-2, \mathrm{t})$ are the vertices of a right angled triangle with $\angle \mathrm{B}=90^{\circ}$. Then find the value of $t$.

Sol. 8 A (5,2), B (2,-2), C(-2, t) are verticals of right angles triangle

$$
\angle \mathrm{B}=90^{\circ}
$$

Using distance formula

$$
\begin{aligned}
& \mathrm{AB}=\sqrt{(5-2)^{2}+(2+2)} \\
& \mathrm{BC}=\sqrt{(2+2)^{2}+(-2 \quad t)} \\
& \mathrm{AC}=\sqrt{(5+2)^{2}+(2+t)}
\end{aligned}
$$

Now, using Pythagoras theorem in $\Delta \mathrm{ABC}$, we have

$$
\begin{aligned}
& \mathrm{AB}^{2}+\mathrm{BC}^{2}=\mathrm{AC}{ }^{2} . \\
& \left(3^{2}+4^{2}\right)+\left(4^{2}+(2+\mathrm{t})^{2}\right)=\mathrm{T}^{2}+(2-\mathrm{t})^{2} \\
& \Rightarrow 9+16+16+4+\mathrm{t}^{2}+4 \mathrm{t}=49+4+\mathrm{t}^{2}-4 \mathrm{t} \\
& \Rightarrow 41+4+4 \mathrm{t}=53-4 \mathrm{t} \\
& \Rightarrow 8 \mathrm{t}=53-4 \mathrm{t} \\
& \Rightarrow 8 \mathrm{t}=8 \\
& \Rightarrow \mathrm{t}=1
\end{aligned}
$$

Hence the value \& t is 1 .

FREE Education

Q9. Find the ratio in which the point $\mathrm{P}(-,-)$ and $B(2,-5)$.

## Sol. 9

| $\mathbf{k}$ | $\mathbf{P}$ | $\mathbf{I}$ |
| :---: | :---: | :---: |
| $\mathbf{A}$ | B |  |
| $\left(\frac{1}{2}, \frac{3}{2}\right)$ | $\left(\frac{3}{4}, \frac{5}{12}\right)$ | $(2,-5)$ |

Let us assume that the point P divides AB in the ratio $\mathrm{k}: 1$.
Then using section formula, we have

$$
\begin{aligned}
& \mathrm{P}=\left(-\frac{-}{-}\right) \\
& (-,-)=\left(\square,-\frac{-}{\square}\right) \\
& -=- \\
& \text { and }-=\square \\
& -=-\quad \\
& 3(\mathrm{k}+1)=(2 k+-) 4 . \\
& 3 \mathrm{k}+3=8 \mathrm{k}+2 . \\
& 5 \mathrm{k}=1 . \quad \mathrm{k}=-
\end{aligned}
$$

Hence the required ratio is $\mathrm{k}=1$ i.e. $-=1$ or $1: 5$.
Q10. Solve the following quadratic equation for x :
$9 x^{2}-6 b^{2} x-\left(a^{4}-b^{4}\right)=0$
Sol. $109 x^{2}-6 b^{2} x+b^{4}-a^{4}$
$(3 \mathrm{x})^{2}-2(3 \mathrm{x})\left(\mathrm{b}^{2}\right)+\left(\mathrm{b}^{2}\right)^{2}-\mathrm{a}^{4}$
$\left(3 \mathrm{x}-\mathrm{b}^{2}\right)^{2}-\left(\mathrm{a}^{2}\right)^{2}=0$

$$
\begin{aligned}
& \left(3 x-b^{2}+a^{2}\right)\left(3 x-b^{2}-a^{2}\right)=0 \\
& x=-\quad x=-
\end{aligned}
$$

## Section -C

Q11. In Fig. 3, APB and AQO are semicircles, and $\mathrm{AO}=\mathrm{OB}$. If the perimeter of the figure is 40 cm , find the area of the shaded region. [User $\pi=-]$.

Figure 3

Sol. 11 AO = OB
Perimeter of figure
$=\pi r+\pi R+R$
$r=-$

Perimeter $=-+\pi \mathrm{R}+\mathrm{R}=R(-+1)$
$40=R(-+1)$
$\mathrm{R}=\overline{-}=\square=\bar{\square}=7$
$\mathrm{R}=7 \mathrm{~cm} . \mathrm{r}=-=3.5 \mathrm{~cm}$

Area of shaded region $=-+-$
$=-+-$
$=-+-$
$=\square+\square$
$=-\quad 77=1.25 \times 77=96.25 \mathrm{~cm}^{2}$

Q12. A solid wooden toy is in the form of a hemisphere surmounted by a cone of same radius. The radius of hemisphere is 3.5 cm and the total wood used in the making of toy is 166 cm 3 . Find the height of the toy. Also, find the cost of painting the hemispherical part of the toy at the rate of Rs. 10 per $\mathrm{cm}^{2}$. [Use $\pi=-$ ]

Sol. $12 \mathrm{R}=3.5 \mathrm{~cm}$
$\mathrm{V}=-\mathrm{cm}$
Height of cone $=\mathrm{H}$

Volume $=-\quad+-$
$-=-[2 R+H]$
$\overline{3.53 .5}=2 \times 3.5+$
$6=H$
$\mathrm{H}=6 \mathrm{~cm}$
Surface area of hemispherical part to painted $=2 \pi R^{2}=2 \times 22 / 7 \times 3.5 \times 3.5$

$$
=22 \times 3.5=77 \mathrm{~cm}^{2}
$$

Total Cost $=10 \times 77=$ Rs. 770
Q13. In Fig. 4, from the top of a solid cone of height 12 cm and base radius 6 cm , a cone of height 4 cm is removed by a plane parallel to the base. Find the total surface area of the remaining solid. (User $\pi=-$ and $\sqrt{5}=2.236$ )

Sol. 13 Using similarity

- = -
- = -
$\mathrm{r}=2 \mathrm{~cm}$
$\mathrm{r}=2 \mathrm{~cm}$
$(\mathrm{H}-\mathrm{h})=8$
$\mathrm{R}=6 \mathrm{~cm}$
$\mathrm{l}=\sqrt{r^{2}+h^{2}}=\sqrt{4+16}=2 \sqrt{5}$

Figure 4

$$
\begin{aligned}
& -=- \\
& L=-=\frac{2 \sqrt{5}}{}=6 \sqrt{5} \\
& \text { TSA }=\pi r^{2}+\pi R^{2}+\pi(\mathrm{L}-\mathrm{l})(\mathrm{r}+\mathrm{R}) \\
& =\pi[4+36+4 \sqrt{5} \times 8] \\
& =8 \pi[5+4 \sqrt{5}]=350.592 \mathrm{~cm}^{2}
\end{aligned}
$$

Q14. In Fig. 5, from a cuboidal solid metallic block, of dimensions $15 \mathrm{~cm} \times$ $10 \mathrm{~cm} \times 5 \mathrm{~cm}$, a cylindrical hole of diameter 7 cm is drilled out. Find the surface area of the remaining block. [Use $\pi=-$ ]

Sol. 14 Surface area of remaining block = Surface area of block - 2 area of circle $+\mathrm{C} \cdot \mathrm{SA} \cdot$ of cylinder formed

Figure 5
$=2(15 \times 10+10 \times 5+5 \times 15)-2$

$$
-x-+2 \quad-\times 5
$$

$=2[275]-77+110$
$=583 \mathrm{~cm}^{2}$
Q15. The angle of elevation of the top of a building from the foot of the tower is $30^{\circ}$ and the angle of elevation of the top of the tower from the foot of the building is $45^{\circ}$. If the tower is 30 m high, find the height of the building.

Sol. 15 AB $\rightarrow$ Tower
$\mathrm{CD} \rightarrow$ Building
In $\triangle \mathrm{ABC}$
$\tan 45=-$
$\mathrm{BC}=\mathrm{AB}$

$\mathrm{BC}=30$
In $\triangle$ BDC
$\tan 30=-$
$C D=\frac{\sqrt{3}}{}=10 \sqrt{3} \mathrm{~m}$.

Q16. In Fig. 6, find the area of the shaded region [Use $\pi=3.14$ ]

Figure 6
Sol.16 ABCD will be square with side $=$ diameter of semi-circle

Radius + side + radius $=14-3-3$
$r+2 r+r=8$
$\mathrm{r}=2 \mathrm{~cm}$

Area of unshaded figure $=4^{2}+4-$

$=16+25 \cdot 12$
$=41 \cdot 12 \mathrm{~cm}^{2}$
Area of shaded figure $=14^{2}-41 \cdot 12$
$=154.88 \mathrm{~cm}^{2}$
Q17. Find that non-zero value of $k$, for which the quadratic equation $k x^{2}+1-2(k-1) x+x^{2}=0$ has equal roots. Hence find the roots of the equation.

Sol. $17 \mathrm{kx}^{2}+1-2(\mathrm{k}-1) \mathrm{x}+\mathrm{x}^{2}=0$
$\mathrm{x}^{2}(\mathrm{k}+1)-2(\mathrm{k}-1) \mathrm{x}+1=0$
For equal roots
$\mathrm{D}=0$
$b^{2}-4 a c=0$
$4(k-1)^{2}-4(1)(k+1)=0$
$4\left(\mathrm{k}^{2}+1-2 \mathrm{k}\right)-4 \mathrm{k}-4=0$
$4 \mathrm{k}^{2}+4-8 \mathrm{k}-4 \mathrm{k}-4=0$
$4 \mathrm{k}^{2}-8 \mathrm{k}-4 \mathrm{k}=0$
$\mathrm{k}[4 \mathrm{k}-12]=0$
$\mathrm{k}=0, \mathrm{k}=3$
Since nor - zero value is required
$\mathrm{k}=3$ (Ans.)
Q18. All red face cards are removed from a pack of playing cards. The remaining cards were well shuffled and then a card is drawn at random from them. Find the probability that the drawn cards is.

Sol. 186 Red face cards are there remaining cards $=46$
(i) Red cards remaining $=$ 26-6
$=20$
Probability $=-=-$
(ii) Face cards remaining $=6$

Probability $=-=-$
(iii) Card of clubs $=13$, Probability $=-$

Q19. Find the area of the triangle $P Q R$ with $Q(3,2)$ and the mid-points of the side through $Q$ being $(2,-1)$ and $(1,2)$.

Sol. 19 Using mid-point formula $-=2 \quad-=-1$
$x=1 \quad y=-4$
$-=1 \quad-=1$
$a=-1 \quad b=0$
P (1, -4)

R ( $-1,0$ )
Q $(3,2)$
Area of $\Delta=|-[1(0-2)+(-1)(2+4)+3(-4-0)]|$
$-|-(-2-6-12)|$
$=10$ sq units
Q20. If $S_{n}$ denotes the sum of first $n$ terms of an A.P. , prove that $S_{10}=3\left|S_{20}-S_{10}\right|$
Sol. $20 \quad S_{30}=3\left(\mathrm{~S}_{20}-\mathrm{S}_{10}\right)$
$S_{n}=-(2 a+(n-1) d)$
$S_{30}=-(2 a+29 d)=15(2 a+29 d)$
$3\left(S_{20}-S_{10}\right)=3[-(2 a+19 d)--(2 a+9 d)]$
$=3[10 a+145 d]$
$=15[(2 a+2 a d)$
From (1) and (2)
$\mathrm{S}_{30}=3\left(\mathrm{~S}_{20}-\mathrm{S}_{10}\right)$

## Section - D

Q21. Prove that the tangent at any point of a circle is perpendicular to the radius through the point of contact.

Sol. 21 Given : A circle C ( $0, r$ ) and a tangent
$A B$ at a point $P$
To prove : OP $\perp \mathrm{AB}$

Construction: Take any point Q , other than P , on the tangent AB . Join OQ suppose OQ meets the circle at R.

Proof:-
We know that among all line segment joining point 0 to a point on AB , the shortest one is perpendicular to AB .

Hence to prove $\mathrm{OP} \perp \mathrm{AB}$, we shall first prove that OP is shorter than any other segment joining 0 to any point of $A B$.

Clearly, OP = OR (radius)
Now, $\quad 0 \mathrm{Q}=\mathrm{OR}+\mathrm{RQ}$
OQ > OR
$\mathrm{OQ}>\mathrm{OP} \quad(\because \mathrm{OP}=\mathrm{OR})$
$\mathrm{OP}<\mathrm{OQ}$
Thus, OP is shorter than any other segment joining 0 to any point of $A B$
Hence OP $\perp \mathrm{AB}$.
Hence the tangent at any point of a circle is perpendicular to the radius through point of contact.

Q22. In Fig.7, tangents PQ and PR are drawn from an external point $P$ to a circle with centre 0 , such that $\angle R P Q=30^{\circ}$. A chord $R S$ is drawn parallel to the tangent $P Q$. Find $\angle R Q S$.

Figure 7
Sol. 22 Since, $\mathrm{PQ}=\mathrm{PR}$
$\angle \mathrm{PQR}=\angle \mathrm{QPR}=\square=75^{\circ}$
Now, $\angle \mathrm{RSQ}=\angle \mathrm{RQP}=75^{\circ}$ (because angle in equal segment)

Also, $\angle \mathrm{SQP}=180-\angle \mathrm{RSQ}$ (internal angles)
$\mathrm{m} \angle \mathrm{SQP}=105 \therefore \angle \mathrm{RQS}=30^{\circ}$

Q23. From a point $P$ on the ground the angle of elevation of the top of a tower is $30^{\circ}$ and that of the top of a flag staff fixed on the top of the tower, is $60^{\circ}$. If the length of the flag staff is 5 m , find the height of the tower.

Sol. 23 In $\Delta$ CBP BC is tower $\rightarrow \mathrm{H}$
$\tan 30=-\mathrm{AC}$ is flag $\rightarrow \mathrm{h}$
$\sqrt{\sqrt{3}}=-$
$B P=H \sqrt{3}$
$\tan 60=-=-$
$B P=\frac{}{\sqrt{3}}$
From (1) and (2)
$\overline{\sqrt{3}}=\sqrt{3} H \quad \Rightarrow \mathrm{H}+\mathrm{h}=3 \mathrm{H}$
$\mathrm{h}=2 \mathrm{H}$
Length of flag staff $h=5 \mathrm{~m}=2 \mathrm{H}$
Length of tower $=2.5 \mathrm{~m}$
Q24. Ramkali required Rs. 2500 after 12 weeks to send her daughter to school. She saved Rs. 100 in the first week and increased her weekly saving by Rs. 20 every week. Find whether she will be able to send her daughter to school after 12 weeks.

What value is generated in the above situation?
Sol. 24 First weak $=100$
Second weak $=120$
Third weak $=140$
So it will form A.P. with 12 terms
$\mathrm{a}=100, \mathrm{~d}=20$

$$
=\underline{12}[2 \times 100+(12-1) 20]
$$

$=6[200+220]$
$=6 \times 440$
$=$ Rs. $2640>$ Rs. 2500
Yes she will be able to send money.

Q25. The numerator if a fraction is 3 less than its denominator. If 2 is added to both the numerator and the denominator, then the sum of the new fraction and original fraction is 一. Find the original fraction.

Sol. 25 Let Denominator be x
Numerator $\mathrm{x}-3$

Fraction $=-$

New fraction $=-$

ATQ
$-+-=-$
$\frac{\left(\begin{array}{ll}\mathrm{x} 3)(\mathrm{x} 2)+\left(\begin{array}{ll}\mathrm{x} & 1) \mathrm{x} \\ \mathrm{x}(\mathrm{x} 2)\end{array}\right. & - \\ \end{array}\right]}{}$
$\longrightarrow-=-$
$40 x^{2}-40 x-120=29 x^{2}+58 x$
$11 x^{2}-98 x-120=0$
$11 x^{2}-110 x+12 x-120=0$
$11 x(x-10)+12(x-10)=0$
$(11 x+12)(x-10)=0$
$X=-$ Rejected as $x$ is integer/whole
$x=10$
Original Fraction $=-$
Q26. Water is flowing at the rate of $2.52 \mathrm{~km} / \mathrm{h}$ through a cylindrical pipe into a cylindrical tank, the radius of whose base is 40 cm , If the increase in the level of water in the tank, in half an hour is 3.15 m , find the internal diameter of the pipe.

Sol. 26 Rate of flowing $=2.52 \mathrm{~km} / \mathrm{hr}$

$$
\begin{aligned}
& =2.52 \times-- \\
& =0.7 \mathrm{~m} / \mathrm{s}
\end{aligned}
$$

FREE Education

Let $r$ be radius of pipe

Volume flowing through pipe $=\pi r^{2} 0.7-$

$$
\begin{aligned}
& =0.7 \times-\mathrm{r}^{2} \\
& =2.2 \mathrm{r}^{2}-
\end{aligned}
$$

Time $=30 \mathrm{~min}=1800 \mathrm{~s}$
Volume flown $=2.2 \times \mathrm{r}^{2} \times 1800 \mathrm{~m}^{3}$
In tank
Height $=3.15 \mathrm{~m}$
Radius $=0.4 \mathrm{~m}$
Volume flown from pipe $=$ volume rised in tank
$2.2 \times r^{2} \times 1800=\pi \quad 0.4 \times 0.4 \times 3.15$
$\mathrm{r}^{2}=\frac{0.40 .40 .45}{2.2}$

$\mathrm{r}^{2}=$| 0.4 | 0.4 | 0.45 |
| :--- | :--- | :--- |

$r=\frac{0.4}{0.2}=2 \mathrm{~cm}$.

Diameter $=2 \mathrm{r}=4 \mathrm{~cm}$.
Q27. If $\mathrm{A}(-4,8), \mathrm{B}(-3,-4),(0,-5)$ and $\mathrm{D}(5,6)$ are the vertices of a quadrilateral ABCD , find its area.

Sol. 27 A - (-4, 8)
B $-(-3,-4)$
C - $(0,-5)$
D $-(-5,6)$

Area of quadrilateral $=$ Area $\mathrm{ABC}+$ Area ADC
Area $\mathrm{ABc}=|-[-4(-4+5)+(-3)(-5-8)+0(8+4)]|$

FREE Education
$=-(-4+39)$
$=-\mathrm{sq}$ unit

Area ADC $=\mid-(-4[6+5)+5(-5-8)+0(8-6) \mid]$
$=|-(-44+65)|$
$=-\mathrm{sq}$ units
Area of quad $=-+-=-=72$ sq units
Q28. A 21 m deep well with diameter 6 m is dug and the earth from digging is evenly spread to form a platform $27 \mathrm{~m} \times 11 \mathrm{~m}$. Find the height of the platform. [Use $\pi=-$ ]

Sol. 28 volume of earth due out $=$ volume of embankment
Radius $=3 \mathrm{~m} \bar{\wedge} \times 3 \times 3 \times 21=27 \times 11 \times h$
$\mathrm{h}=\square$
$\mathrm{h}=2 \mathrm{~m}$
Q29. A bag contains 25 cards numbered from 1 to 25 . A card is drawn at random from the bag. Find the probability that the number on the drawn card is:
(i) Divisible by 3 or 5
(ii) a perfect square number

Sol. 29 No. of cards Divisible by 3 or 5 = cards divisible by $5+$ cards divisible by 3 - cards divisible by 3 and 5
$=5+8-1$
$=12$
Probability $=-$
Perfect square $=1,4,9,16,21 \quad$ Probability $=-=-$.
Q30. Draw a line segment $A B$ of length 7 cm . Talking $A$ as centre, draw a circle of radius 3 cm and talking B as centre, draw another circle of radius 2 cm . Construct tangents to each circle from the centre of the other circle.

## Sol. 30 Steps:-

(i) Draw the perpendicular bisector of AB mark mid -point of $A B=X$.
(ii) Now from X draw a circle taking $\mathrm{AX}=\mathrm{BX}$ as the radius
(iii) mark the points of intersection of $\mathrm{S}, \mathrm{S}_{2}, \mathrm{~S}_{3}, \mathrm{~S}_{4}$
(iv) Join BS and $\mathrm{BS}_{2}$

Also $\mathrm{AS}_{3}$ and $\mathrm{AS}_{4}$
These are required tangents.
Q31. Solve for x :

Sol. $31-+-=$

$$
\underline{3\left(\begin{array}{ll}
x & 1
\end{array}\right)+4\left(\begin{array}{ll}
x & 1
\end{array}\right)}=
$$

$$
\begin{aligned}
& (7 x+1)(4 x-1)=29\left(x^{2}-1\right) \\
& 28 x^{2}-3 x-1=29 x^{2}-29 \\
& x^{2}+3 x-28=0 \\
& (x+7)(x-4)=0 \\
& x=-7 \\
& x=4
\end{aligned}
$$
