## CHAPTER - 3

## LINEAR EQUATIONS IN TWO VARIABLES

An equation of the form $\mathrm{ax}+\mathrm{by}+\mathrm{c}=0$, where $\mathrm{a}, \mathrm{b}$ and c are real numbers, such that a and b are not both zero, is called a linear equation in two variables.

## Important points to Note:

## S.no Points

1 A linear equation in two variable has infinite solutions
2 The graph of every linear equation in two variable is a straight line
$3 x=0$ is the equation of the $y$-axis and $y=0$ is the equation of the $x$-axis
4 The graph $x=a$ is a line parallel to $y$-axis.
5 The graph $y=b$ is a line parallel to $x$-axis
6 An equation of the type $y=m x$ represents a line passing through the origin.

7 Every point on the graph of a linear equation in two variables is a solution of the linear
equation. Moreover, every solution of the linear equation is a point on the graph

| S.no | Type of equation | Mathematical representation | Solutions |
| :---: | :---: | :---: | :---: |
| 1 | Linear equation in one Variable | $a x+b=0, a \neq 0$ <br> a and b are real number | One solution |
| 2 | Linear equation in two Variable | $a x+b y+c=0, a \neq 0$ and $\mathrm{b} \neq 0$ <br> $\mathrm{a}, \mathrm{b}$ and c are real number | Infinite solution possible |
| 3 | Linear equation in three Variable | $\begin{aligned} & a x+b y+c z+d=0, a \neq 0 \\ & , b \neq 0 \text { and } c \neq 0 \end{aligned}$ | Infinite solution possible |
|  |  | $a, b, c, d$ are real number |  |

## Simultaneous pair of linear equation:

A pair of linear equation in two variables
$a_{1} x+b_{1} y+c_{1}=0$
$\mathrm{a}_{2} \mathrm{x}+\mathrm{b}_{2} \mathrm{y}+\mathrm{c}_{2}=0$

Graphically it is represented by two straight lines on Cartesian plane.

The graphical solution can be obtained by drawing the lines on the Cartesian plane.

## Algebraic Solution of system of Linear equation:

| S.no Type of method | Working of method |
| :--- | :--- |
| Method of elimination by |  |
| substitution |  | 1) Suppose the equation are

$$
\frac{x}{b_{1} c_{2}-b_{2} c_{1}}=\frac{-y}{a_{1} c_{2}-a_{2} c_{1}}=\frac{1}{a_{1} b_{2}-a_{2} b_{1}}
$$

4) Value of $x$ and $y$ can be find using the $x=>$ first and last expression $y=>$ second and last expression
