$R-\left\{x: x=(2 n+1) \frac{\pi}{2}, n \in z\right\}$
$R-\{x: x=n \pi, n \in z\}$
$\left.R-\left\{x: x=(2 n+1) \frac{\pi}{2}\right\} n \in z\right\}$
$\mathrm{R}-[-1,1]$
$R-\{x: x=n \pi, n \in z\}$
2. Inverse Function - If $f: X \rightarrow Y$ such that $y=f(x)$ is one-one and onto, then we define another function $g: Y \rightarrow X$ such that $x=g(y)$, where $x \in X$ and $y \in Y$ which is also one-one and onto. In such a case domain of $g=$ Range of $f$ and Range of $g=$ domain of $f$
$g$ is called inverse of $f$ or $g=f^{-1}$
Inverse of $g=g^{-1}=\left(f^{-1}\right)^{-1}=f$.
3. Principal value Branch of function $\sin ^{-1}$ - It may be noted that for the domain $[-1,1]$ the range sould be any one of the intervals $\left[-\frac{3 \pi}{2}, \frac{-\pi}{2}\right],\left[\frac{-\pi}{2}, \frac{\pi}{2}\right]$ or $\left[\frac{\pi}{2}, \frac{3 \pi}{2}\right]$ corresponding to each interval we get a branch of the function $\sin ^{-1}$ the branch with range $\left[\frac{-\pi}{2}, \frac{\pi}{2}\right]$ is called the principal value branch.
Thus $\sin ^{-1}:[-1,1] \rightarrow\left[\frac{-\pi}{2}, \frac{\pi}{2}\right]$

4. Principal Value branch of function $\cos ^{-1}$ - Domain of the function $\cos ^{-1}$ is $[-1,1]$.

Its range is one of the intervals $(-\pi, 0),(0, \pi),(\pi, 2 \pi)$. etc. The branch with range $(0, \pi)$ is called the principal value branch of the function $\cos ^{-1}$ thus $\cos ^{-1}:[-1,1] \rightarrow[0, \pi]$

5. Principal Value branch of function $\tan ^{-1}$ - The function $\tan ^{-1}$ is defined whose domain is set of real numbers and range is one of the intervals $\left(\frac{-3 \pi}{2}, \frac{-\pi}{2}\right),\left(\frac{-\pi}{2}, \frac{\pi}{2}\right),\left(\frac{\pi}{2}, \frac{3 \pi}{2}\right)$ etc.
Graph of the function is as shown in the adjoining figure the branch with range $\left(\frac{-\pi}{2}, \frac{\pi}{2}\right)$ is called the pricnipal value branch of function $\tan ^{-1}$. Thus $\tan ^{-1}: R \rightarrow\left(\frac{-\pi}{2}, \frac{\pi}{2}\right)$.

6. Principal Value branch of function $\operatorname{cosec}^{-1}$ - The function $\operatorname{cosec}^{-1}$ is defined on a function whose domain is $R-(-1,1)$ and the range is anyone of the interval $\left[\frac{-3 \pi}{2}, \frac{-\pi}{2}\right]-\{\pi\},\left[\frac{-\pi}{2}, \frac{\pi}{2}\right]-\{0\},\left[\frac{\pi}{2}, \frac{3 \pi}{2}\right]-\{\pi\}, \ldots \ldots$. The function corresponding to the range $\left[-\frac{\pi}{2}, \frac{\pi}{2}\right]-\{0\}$ is called the principal value branch of $\operatorname{cosec}^{-1}$
Thus, $\operatorname{cosec}^{-1}: \mathrm{R}-(-1,1) \rightarrow\left[-\frac{\pi}{2}, \frac{\pi}{2}\right]-\{0\}$

7. Principal value branch of function $\mathbf{s e c}^{-1}-\mathrm{The} \mathrm{sec}^{-1}$ is defined as a function whose domain is $R-(-1,1)$ and the range could be any of the intervals is ........, $[-p, 0]-\left\{\frac{-\pi}{2}\right\},[0, p]-\left\{\frac{\pi}{2}\right\},[\pi, 2 \pi]-\left\{\frac{3 \pi}{2}\right\} \ldots .$. etc. The branch corresponding to range $[0, \pi]-\left\{\frac{\pi}{2}\right\}$ is known as the principal value branch of $\sec ^{-1}$. Thus $\sec ^{-1}: \mathrm{R}-(-1,1) \rightarrow[0, \pi]-\left\{\frac{\pi}{2}\right\}$.
8. Principal Value branch of function $\cot ^{-1}-$ The $^{\cot ^{-1}}$ function is defined as the function whose domain is $R$ and the range is any of the intervals. $\qquad$ $(-\pi, 0)(0, \pi),(\pi, 2 \pi)$ etc. The branch corresponding to $(0, \pi)$ is called the principal value branch of the function $\cot ^{-1}$, then $\cot ^{-1}: \mathrm{R} \rightarrow(0, \pi)$
