## Class 6 Important Formulas <br> Chapter 4 - Basic Geometrical Ideas

If $\mathrm{a}, \mathrm{b}, \mathrm{c}$, etc are whole numbers, then

1. $\mathrm{a}+\mathrm{b}$ is a whole number. [Closure property of addition]
2. $\mathrm{a} \times \mathrm{b}$ is a whole number. [Closure property of multiplication]
3. $(a-b)$ may or may not be a whole number.
4. $a+b$ may or may not be a whole number
5. $a+b=b+a$
6. $a \times b=b \times a$
7. $\mathrm{a}-\mathrm{b}$ is not equal to $\mathrm{b}-\mathrm{a}$ if a and b are unequal.
8. $\mathrm{a}+\mathrm{b}$ is not equal to $\mathrm{b}+\mathrm{a}$ if a and b are unequal.
9. $a+b=b+a$ if and only if $a=b$.
10. $(\mathrm{a}+\mathrm{b})+\mathrm{c}=\mathrm{a}+(\mathrm{b}+\mathrm{c})$ [Associativity of addition].
11. $\mathrm{a} \times(\mathrm{b} \times \mathrm{c})=(\mathrm{a} \times \mathrm{b}) \times \mathrm{c} \quad$ [Associativity of Multiplication].
12. $\mathrm{a} \times(\mathrm{b}+\mathrm{c})=\mathrm{a} \times \mathrm{b}+\mathrm{a} \times \mathrm{c}$ [Distributive of multiplication over addition].
13. $\mathrm{a} \times(\mathrm{b}-\mathrm{c})=\mathrm{a} \times \mathrm{b}-\mathrm{a} \times \mathrm{c}$, if $\mathrm{b}>\mathrm{c}$ [Distributive of multiplication over Subtraction].
14. $\mathrm{a}+0=\mathrm{a}=0+\mathrm{a}$ [Existence of multiplicative identity].
15. $\mathrm{a} \times 0=0=0 \times \mathrm{a}$ ]Existence of multiplication identity]
16. $\mathrm{a} \times 1=\mathrm{a}=1 \times \mathrm{a}$
17. $\mathrm{a}+1=\mathrm{a}$.
18. In general $(a-b)-c \neq a-(b-c)$.
19. In general $(a+b)+c \neq a+(b+c)$.
20. If a is dividend, $\mathrm{b}(\neq 0)$ divisor, q quotient and r remainder, then $\mathrm{a}=\mathrm{bq}+\mathrm{r}$.
[Division algorithm]
