SECTION: A (READING) (14)

Q.1 Read the passage given below (7)

Plastic has become an inseparable part of modern life. From packaging materials and household items to medical equipment and automobiles, plastics are used everywhere because they are lightweight, durable, and inexpensive to produce. However, the very qualities that make plastic so useful also make it a serious environmental threat.

Most plastics are non-biodegradable, meaning they do not decompose naturally. As a result, plastic waste accumulates in landfills and oceans, polluting soil and water and endangering wildlife. Sea animals often mistake plastic debris for food, leading to severe harm or death. Moreover, the burning of plastic releases toxic gases that contribute to air pollution and climate change.

To address this issue, many countries are promoting recycling and encouraging the use of biodegradable alternatives such as cloth, paper, and jute. Individuals, too, can make a difference by reducing single-use plastics, reusing containers, and choosing eco-friendly products.

While plastic continues to serve many human needs, it is essential to use it responsibly. A conscious shift toward sustainable practices can ensure that the convenience of plastic does not come at the cost of our planet's health.

Based on your understanding of the passage, answer the questions given below

Q.2 Read the passage given below : (7)

Energy is the driving force behind modern life. It powers our homes, schools, transport, and industries. However, much of this energy still comes from non-renewable sources such as coal, oil, and natural gas. These fuels release carbon dioxide when burned, contributing to air pollution and global warming. According to the International Energy Agency (IEA), about 65% of the world's electricity is still produced from fossil fuels.

To reduce environmental damage, countries are shifting towards **renewable energy sources** like solar, wind, hydro, and geothermal power. These resources are natural, unlimited, and do not harm the planet. In 2023, renewable sources provided nearly 30% of global electricity, and this number is steadily rising. India, for instance, ranks among the top five nations in solar energy production.

Renewable energy not only helps fight climate change but also creates millions of green jobs and ensures energy security. Students can contribute by conserving electricity, supporting clean energy campaigns, and spreading awareness.

A world powered by renewable energy promises a cleaner, safer, and more sustainable future for generations to come.

Based on your understanding of the passage, answer the questions given below (7)

- i. What percentage of the world's electricity still comes from fossil fuels? 1
A. 30%
B. 50%
C. 65%
D. 90%
- ii. Which of the following is **not** a renewable energy source? 1
A. Solar
B. Wind
C. Coal
D. Hydro
- iii. What is one major benefit of renewable energy? 1
A. It increases pollution
B. It creates green jobs and reduces carbon emissions
C. It is expensive and limited
D. It harms the environment
- iv. In which year did renewable sources provide nearly 30% of global electricity? 1
A. 2020
B. 2023
C. 2025
D. 2019
- v. Why are renewable energy sources considered better than fossil fuels? 2
- vi. Fossil fuels are _____ (limited/unlimited) and cause serious pollution and climate change. 1
